think small

accelerometers.

If you're measuring acceleration, shock or vibration, the EGA-125 takes up less than 0.006 cu. in. and weighs less than half a gram.

Yet it gives you full scale readings, both static and dynamic, in the "g" ranges from 5 to 5,000. And its direct mV output—as high as 250—eliminates the need for charge or voltage amplifiers.

Available with .7 critical damping to eliminate resonance, the EGA-125 is probably the smallest device of its type ever made, and can be had in a variety of mounting styles. So you can put it to work just about anywhere.

ENI RF Power Amplifiers

We Wrote the Book on Excellence.

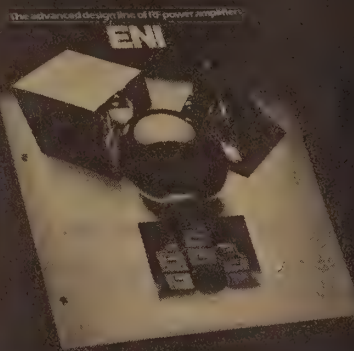

ENI has quite a story to tell. We're the world's largest supplier of solid-state linear amplifiers covering the frequency range of 10 kHz to 1000 MHz with power outputs from 300 milliwatts to over 4000 watts.

Why? Maybe it's because ENI RF power amps cover such a wide range of frequencies, each featuring signal-source versatility, uncommon stability, and failsafe overload.

Or maybe, quite simply, it's because ENI makes the best RF power amplifiers in the world.

Find out for yourself why ENI is a "best seller". Send for our free, full-line power amplifier catalog. Write ENI, 100 Highpower Road, Rochester, NY 14623. Call (716) 427-8300, or Telex 671 1542 ENI UW.

TAUBER AND GATES, YOUR POWER CONNECTION.

Gates energy cells give you design flexibility, long life, superior performance and easy charging. Basic cells are built up in any configuration; series or parallel, case or shrink wrap. Batteries are designed to meet the needs of your application, not the other way around.

Tauber Electronics helped pioneer the Gates Value Distributor concept. From prototype to O.E.M. production, we deliver.

SUPERIOR LEVEL OF RELIABLE LONG TERM PERFORMANCE

BERYLLIUM COPPER CONTACTOR

Use of full heat treated beryllium copper for the positive contact provides several benefits:

- Excellent electrical conductivity
- Totally non-magnetic
- High contact force with low stress-relaxation
- Compatible with existing board layouts — Tails fit .036" minimum finished diameter plated-through holes.
- Ease of use — The tip of positive (top) contact is located in from the edge to ease battery installation. Wide slots provided around periphery for easier removal.
- Contact design — Both contacts are at a defined point, concentrating the spring normal force at the contact points.

PRECISION OEM AND MILITARY APPLICATIONS

Select your airmover from the thousand or more catalog designs or let us custom build it.

Centrifugal Blowers

Centrifugal blowers have special housings for attachment to ducts, boots, transition pieces or equipment walls. Air is moved by a wheel (containing multiple cut-outs or blades), which is driven by any of the various types of IMC motors or by an external source of rotating energy. They are most often used in applications requiring air that is transported through ducts or for blast cooling of electronic and control enclosures where high velocity air is required.

Air Delivery: 6.3 cfm to 3,000 cfm

Frequency: 60 HZ-400 HZ – DC and Brushless DC

Accessories: Outlet Flanges Inlet Rims – Inlet Cones
Inlet Filters Boot Accommodations and Air Vane Switches

Propeller and Tubeaxial Fans

Commercial and military propeller and tubeaxial fans are noted for their short axial length. This facilitates mounting in electronic compartments and cabinets where space is at a premium. Molded airfoil designed impellers provide high air flow at low noise levels.

Propeller Fans

Sizes: 3" to 10.5" diameter.

Air Delivery: 32 cfm to 1,100 cfm.

Frequency: 60 HZ – 400 HZ – Variable and DC.

Tubeaxial Fans

Sizes: 3.125" Sq. to 12.25" diameter round
From 1.5" deep to 3.75"

Frequency: 60 HZ – 400 HZ – Variable

Vaneaxial Fans

The vaneaxial fan is an axial flow airmover whose impeller hub is relatively large and which employs straightening vanes to recover a substantial portion of the pressure. The entire airmover – its motor, impeller and housing are a single source of responsibility. IMC features the Turbo-Slot® vaneaxial fan which produces high pressure at low speed, Mixed Flow fans which combine the space-saving advantages of the axial type fan with the desirable performance characteristics of the centrifugal fan and standard vaneaxial fans. "Hi-Slip" models for high altitude applications are available as well as many custom models to fit your specific needs.

Sizes: 1" to 26" diameter

Air Delivery: 6.5 cfm to 12,000 cfm

Frequency: 60 HZ – 400 HZ – DC and Brushless DC

• PULSE SYSTEMS • COMPUTER GROUNDING CONTACTS • TORQUE INDICATORS • MEDICAL EQUIPMENT • PACKING MACHINERY

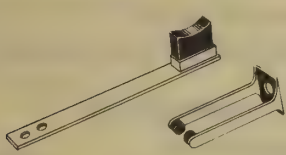

GRAPHALLOY® BRUSHES

Silver-Graphalloy Brushes have been widely used because of low and constant contact drop, extremely low electrical noise, and long life. Over 100 grades are now serving in a wide variety of applications. Silver-Graphalloy Brushes on 1/2-inch-diameter coin silver slip rings have operated successfully in highly critical electrical circuits at speeds up to 100,000 r.p.m.

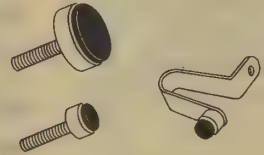

Standard sizes from 1/8"-square to 3/4"-square. Many sizes in stock.

Our Engineering Department will assist you in determining the exact grade of GRAPHALLOY for your needs. Ask for our Brush Inquiry Form 109.

We supply Coin Silver and Bronze Slip Rings, both cylindrical and flat types ... and recommend three brushes per ring ... spaced at 120° ... for best contact. The cylindrical type are designed for press fitting over standard steel shafting. The flat type rings are designed for nesting either on an insulated plate or for molding into insulation. Insulated slip rings of either type, or slip-ring assemblies, can be furnished with leads attached.

No. 168 Series
FLAT TYPE
to 20" O.D.

Standard FLAT Rings have 1/4" radial contact surface and 1/8" radial spacing between adjacent rings.

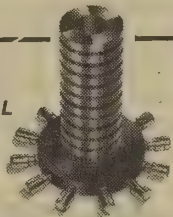

No. 116 Series

YOUR SINGLE SOURCE FOR BUS BARS

CAP-BUS—The Capacitor Bus Bar

ELIMINATE DECOUPLING CAPACITORS and power and ground traces from PCB's. CAP-BUS—the capacitance Bus Bar—has a distributed capacitance of .05 micro farads per lin. inch at 50 VDC with low impedance and inductance. Allows for maximum component density on low cost, two-sided boards. CAP-BUS greatly reduces EMI and RFI emissions with increased total capacitance and enhanced noise reduction. Available for mounting alongside or under the IC's.

TWO-BUS—Power and Ground on PCB's

Distributes power and ground on PCB's. Eliminates power and ground traces. Allows for increased IC density using two-sided boards on what were previously multi-layer applications. The TWO-BUS can be assembled without special tooling. Available for Stand-Up, Under-the-Dip, or Matrix overlay installation.

POWER BUS—Main Power Distribution

Designed for main power distribution for computer and telecommunications applications. The POWER BUS offers increased reliability and cost savings over bulky cable harnesses. Complete power and ground distribution systems can be configured to your systems symmetry, allowing unique advantages and latitude in mechanical design. The POWER BUS provides low inductance and resistance with distributed capacitance. Terminations and finish to your specifications.

STOCK BUS—For Immediate Delivery

Bus Bars for prototype and production application available for immediate delivery. All are laminated for high capacitance, low inductance. Stock Bus Bars include the space-saving two-conductor PCB Bars for Stand-up, Under-the-Dip, or Matrix overlay applications and main power buses with .031 x .062, .025 x .025, and .045 x .045 wire-wrap also solder-tab and push-on termination.

PROTO BUS—For Prototypes

A single conductor, plated and insulated Bus Bar that eliminates waiting, and tooling costs, and is more reliable than a wiring harness. Available in lengths up to 30 inches for small quantity prototypes and longer lengths as required. The Bus Bars can be cut to the length desired. The PROTO BUS is available with solder or quick-connect terminals, and .025" and .045" sq. inch wire-wrap terminals, from stock.

SHORTING BUS—For Commoning Pins

The Shorting Bus is a low cost and efficient method for busing or shorting terminals on Back Plane, Card Cage Connectors or wiring panels. Easy to assemble and solder in place. Terminals easily accessed for wire-wrap terminations after installation. The SHORTING BUS is available for .025 sq. inch, .045 sq. inch and .031 x .062 inch terminals. Available in lengths and busing patterns for your application, from stock.

FREE SAMPLES.

Two Pin Bars for the price of none.

Here's the deal. Call or send the coupon below and we'll send you two free Pin Bar samples. Now that's an offer that's hard to beat.

And you can't beat the connection. Because Lear Siegler Pin Bars grip and connect common-spaced pins better and faster than any other method.

With three times greater contact pressure than other bussing products, Lear Siegler Pin Bars provide 100% reliable, gas-tight terminations. And all Lear Siegler Pin Bars exceed the MIL-STD-202 for resistance to corrosion, thermal and mechanical shock and vibration. Contact voltage drop is 0.533 millivolts maximum per amp.

What's more, because they take up only 1/4" max. per pin, there's lots of room left for discrete and harness wiring.

And best of all, Lear Siegler Pin Bars can save you 40% or more compared

to other termination methods.

For two free samples, complete specifications, and answers to questions engineers and manufacturing supervisors ask most, simply call or send us the coupon.

Wright Capacitors, Inc.

Specialty Ceramic Capacitors

MICROWAVE CAPACITORS

We provide ceramic single layer capacitors custom designed to your needs. Because WCI uses the full range of ceramic dielectrics, capacitances can be achieved as high as 100pf in a chip .015" x .020" x .005".

TIGHT TOLERANCE • ODD VALUES ELEVATED TEMPERATURE

As manufacturers of capacitors, we know that all your designs cannot be met by the standard capacitors available. We can meet your requirements for extended temperature ranges, non-standard capacitance values and tolerances.

MONOLITHIC HIGH VOLTAGE CAPACITORS

Years of experience in High Voltage Ceramic Capacitor design and manufacturing have led to the establishment of a complete line of High Voltage Monolithic Ceramic Capacitors that offer the most volume efficiency.

HIGH VOLTAGE ENCAPSULATED CERAMIC CAPACITORS

We are capable of meeting your demands for that special High Voltage Capacitor that has stringent requirements. Whether it is a leaded encapsulated monolithic or a 40,000 volt custom design that must operate at elevated temperatures, our engineering staff has the experience to package the capacitor to meet your requirements.

Electronic components and piezo ceramics by Vernitron. Over 45 years of innovation.

In piezo ceramics of diverse shapes. In Bimorphs and Unimorphs. Also in ceramic bandpass and ladder filters. In ceramic resonators. And in piezo igniters. That's Vernitron Piezoelectric Division.

We've been making innovations in electronic components and piezo ceramics since 1938. And we're still doing it. Take a look at some of our accomplishments in modern ceramic shapes. We've developed discs, blocks, rings, plates, cylinders, tubes and many custom shapes for sonar use, as ultrasonic, hydrophonic, and as torpedo transducers, and in accelerometers and high voltage generators.

Our PZT®-4 is recommended for use in high voltage generators and high power acoustic radiating transducers because of its ability to withstand high levels of electrical excitation and mechanical stress.

PZT-8 was developed to provide a material with the ultimate in power handling capability. This composition has reduced piezoelectric activity at low to moderate excitation levels.

PZT-5A is recommended

for use in receiver or generator type transducers such as hydrophones, fuses, accelerometers, and vibration pickups in general etc., because of its high sensitivity, permittivity and time stability.

PZT-5H is better suited to low frequency applications because of increased permittivity, accompanied by a reduced Curie point.

The family of PZT-5 materials may also serve in very low power motor-type transducers because of high motion sensitivity.

Vernitron also has developed lead metaniobate materials, PMN-1 and PMN-2, for diverse applications. Their feature is higher Curie points. And we are the originators of Unimorphs and Bimorphs to serve as compact transducers for audio tones.

The above compositions are used in such applications as ultrasonic cleaners, kidney dialysis equipment, heart pacemakers, ink jets, ultrasound scanners, gyros, sonobuoys, automatic erasers and a variety of noisemakers. Also in laser positioning and as motion sensors.

Innovation is also true of our work in bandpass filters, ladder filters, and ceramic resonators. We offer light weight, stable, fixed

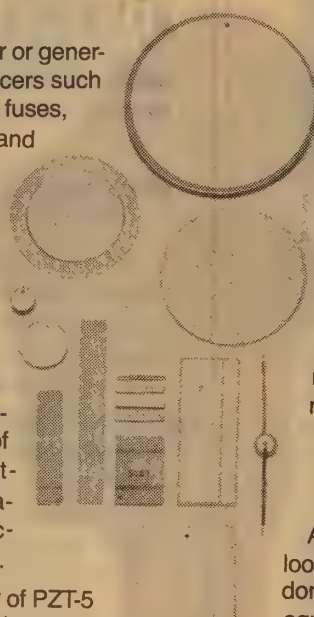

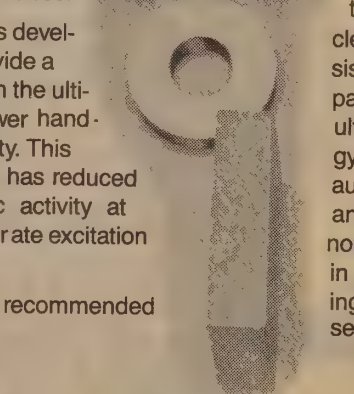

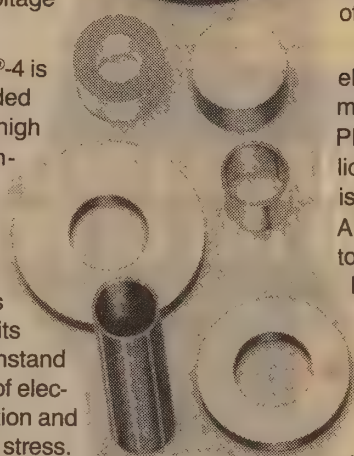

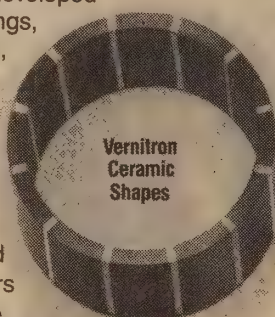

tuned, miniature ceramic filters and resonators with varieties for almost any kind of communications equipment:

consumer —
commercial —
military.

And don't overlook what we've done in piezo igniters for gas fired equipment of all types. Vernitron igniters are original equipment in most makes of barbecue grills, as well as in many furnaces, water heaters and camping lanterns. Vernitron igniters are the world industry standard.

So if you're working with piezo ceramics, in alarms, speakers, lasers, sonar, ink jet printing data processing, communications, telephone development, gyros, or hydrophones, pacemakers or gas-fired equipment give us a call and put our 45 years of innovation and experience — going on 46 — to work.

Just call (216) 232-8600 and ask for "one of the innovators." Or write Vernitron Piezoelectric Division, 232 Forbes Road, Bedford, Ohio 44146, for information on any of these products.

MORE EMI/RFI PROTECTION...

...with a Lindgren "DEI"
Shielded Enclosure

Lindgren double-electrically-isolated (DEI) screen rooms offer 120 dB RF attenuation of electric and plane waves from 14 KHz to 1 GHz... up to 10 times more shielding than any other type of screen room.

All enclosures
fully tested and guaranteed

Only Lindgren provides the proven superior performance of double-electrically-isolated shielding with the benefits of modular construction. Doors feature two RF seals—one inside and one outside on all four edges with a single handle that requires less than 25 lbs. and assures a RF-tight closure by applying cam pressure at three points.

Built of modular panels, Lindgren RF enclosures can be moved, expanded or easily reshaped, and are available in a variety of sizes and shielding materials.

Call or write for full information or applications assistance.

MICROMINIATURE INDUCTORS

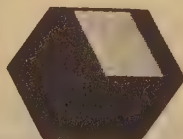

M Series broadband air core choke has high self-resonant frequency (SRF) from 1 to 30 GHz, with inductances (L) from 18 nH to 1 μ H and operating frequencies from 250 MHz. Size .004" - .170" L x .027" O.D. maximum.

PW and PVW Fixed and Tunable Chip Inductors. Inductances from 0.01 μ H to 1.0 mH, Typ Q's from 60@200 MHz to 30@790 KHz. Minimum size .140" W x 0.095" H x 0.180" L. Metalization is suitable for wire bonding or solder reflow.

ST Series are rectangular-shaped, microminiature, top tunable inductors, only .275" H x .100" x .200" to conserve space. With an internal adjusting screw, devices have inductances: 20 nH to 1 mH, typ Q's 30 to 50 over range, tolerances of $\pm 10\%$.

PK Series fixed chip inductors are rectangular for easy assembly, edge plated for forming solder fillet, and feature ceramic substrate. Contact metallization protects plating. Int. connections welded for reflow soldering. Inductances .010 μ H to 1 MH. Typical tolerance $\pm 10\%$, Q's from 60 at 200 MHz to 45 at 7.90 MHz; other available. Size only .160" L x .125" W x .130" H.

The Alps Advantage

- Innovative Technology
- High Quality & Reliability
- Competitive Pricing
- World-Wide Reputation

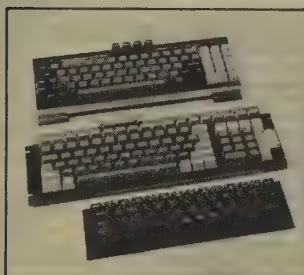

KEY SWITCHES

Choose from several contact types: mechanical, conductive rubber or tactile feedback. Snap-in mounting. Double-shot molded keytops in many colors, shapes, legends. Fully automated assembly assures maximum reliability, with ratings up to 20-million operating cycles.

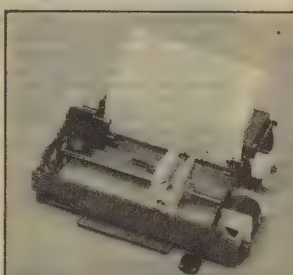

FLOPPY DISK DRIVES

New design units, for 5¼" disks, offers super-slim profile—only 1.69" thick, half the conventional thickness. Standard features include fast access time, automatic eject, long-life ceramic head, and surprisingly low price! Available with or without built-in electronics control board.

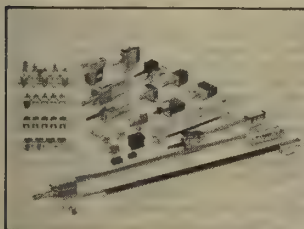

KEYBOARDS

Standard and custom keyboards, fully assembled including switches, keytops, PC board, matrix circuit, encoder circuit. NEW!—Series KCL Low Profile Keyboards meet all the latest European DIN standards for full-travel key switches with reduced profile dimensions.

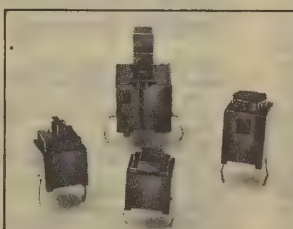

MICROMINIATURE PRINTERS

An incredible example of "The Alps Advantage" in technical innovation, Series DPG printers handle Alpha-Numeric-Graphic requirements, actually writing with microminiature ball point pens (1 or 4 colors!) invented by Alps using exclusive ink technology. Available for 2¼" or 4½" ordinary plain paper. Their small size and small price will astound you!

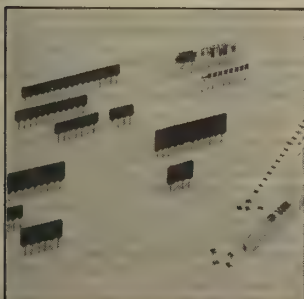

SWITCHES

Alps produces more than 900,000,000 switches per year, including some of the world's smallest, in a variety of types—rotary, push, slide, lever, power, flex and digital—all noteworthy for their unsurpassed smooth-action performance, built-in quality and long-life reliability.

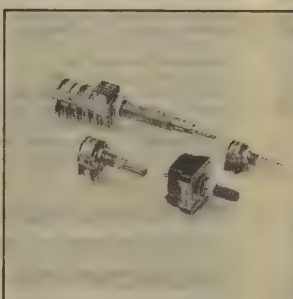

TACT SWITCHES

Tactile key switches with a "snap" (conductive rubber) or "click" (metal contacts) feeling to signal when contact is made. Available in a wide range of life cycle ratings, shapes, sizes, and "feelings"—ideal for many types of mini-keyboard applications.

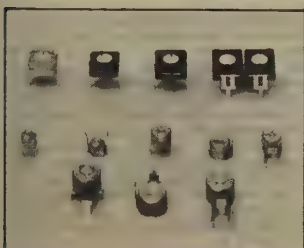

RESISTOR NETWORKS & CHIP RESISTORS

Thick film cermet element on alumina substrate, for extremely high stability. Networks in SIP configuration, from 4 to 17 pins, with resistance values from 10 ohms to 1 megohm. Chips are international standard size, 1.6 × 3.2 × .55 mm, with values from 10 ohms to 10 megohms. Available in bulk, reel tape, or plastic magazine for automatic chip placement machines.

VARIABLE RESISTORS

Rotary and slide types, ranges from 500 ohms to 2 megohms, with a wide variety of diameters, strokes, tapers, mounting, shafts, levers, etc. Exclusive lubricants for high quality smooth action. Miniature trimmer pots, sizes from 4mm to 16mm, with cermet, carbon film or carbon composition elements—ranges from 100 ohms to 2.2 megohms. Stick controls packaged with 2, 3 or 4 pots.

TRIMMER CAPACITORS

Ceramic or film elements, trimmer ranges from 2.5–6 pF to 10–150 pF. Snap-in terminals, with standard, reverse or side mounting—front or rear adjustment. Minimum drift, with virtually linear temperature characteristics. Precision structure protects dielectric from contamination by flux or wax.

OTHER PRODUCTS now available from Alps include: telephone keypads, liquid crystal displays, magnetic heads, cassette mechanisms, RF modulators, switches, TV tuners.

CONTINENTAL CONNECTORS

Precision Electronic Connectors For Commercial & Military Applications

PRINTED CIRCUIT CONNECTORS*

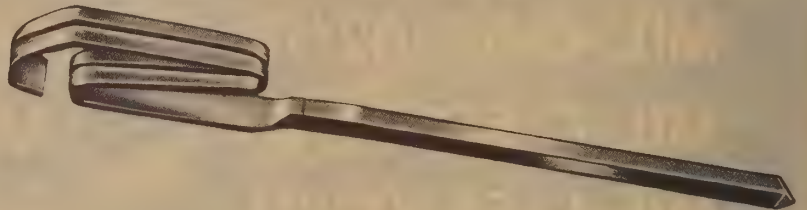

Provide positive, space-saving connections between printed circuitry and conventional wiring through PC boards, tape cables or "plug" mounted subassemblies. Feature Continental's patented "Bellow-form" contacts; glass reinforced Diallyl Phthalate and other moldings. Receptacles accommodate $\frac{1}{32}$ ", $\frac{3}{64}$ ", $\frac{1}{16}$ ", $\frac{3}{32}$ " or $\frac{1}{8}$ " board thickness with single and dual readouts on .050", .075", .100", .125", .150", .156" and .200" contact centers.

SERIES 600. Card edge printed circuit connectors for $\frac{1}{32}$ ", $\frac{3}{64}$ ", $\frac{1}{16}$ ", $\frac{3}{32}$ " and $\frac{1}{8}$ " printed circuit boards. Available in a wide range of sizes, single and dual readout contact configuration with up to 210 terminals . . . solder lug, dip solder, taper tab and .025" and .045" square solderless-wrap terminations.

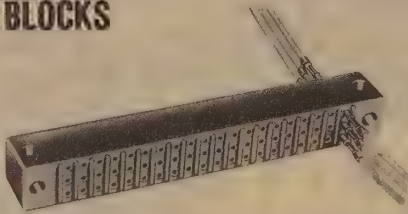

SERIES 672. Provide conveniently located test points to check printed circuitry. Available with 4, 5, 6, 8, 10, 11, 20, 21, 28, 30, 42 and 63 contacts which grip and hold securely a standard .080" test probe. Connectors have recessed and floating pin terminals mounted at right angle to the test socket. Pins dip solder to printed circuit board.

"BELLOWFORM" CONTACT

Coil spring action grip clasps printed circuit board firmly over 100% of the contact area. Contact design permits use of undersized or oversized board tolerances while maintaining low contact resistance. It "rides" with the printed circuit board under extreme vibration conditions or misalignment.

TERMINAL BLOCKS

SERIES 145-58, 145-50 AND 145-48. Precision reamed solderless taper pin receptacles in single, dual and triple row construction, molded-in for highest durability. Available in any combination of feedthru individual or shorting terminals. Internal bus between any combination of terminals eliminates external wiring. Mounting holes for stacking, right angle and perpendicular mounting. Molding is glass filled Diallyl Phthalate, Type GDI-30 per MIL-P-19833 specifications.

SERIES J. .050"/.100" Contact Centers 9, 11, 15, 21, 25, 31, 37, & 51 Contact Sizes.

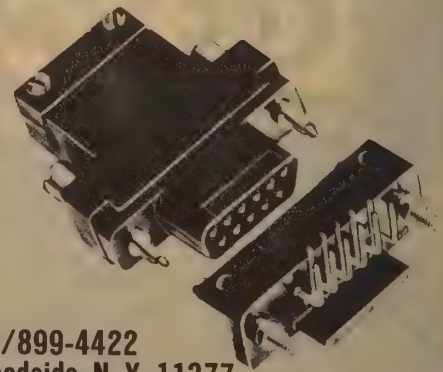

Pin & socket types with wire crimp removable socket contacts

Polarizing screwlocks & plastic hoods

Single piece high impact molded shell with configuration that prevents mismatching

Right angle or straight thru wiring for PC board applications

Choice of terminals on plug—turret, solder cup or solderless-wrap

Proportional Joysticks

Small Size

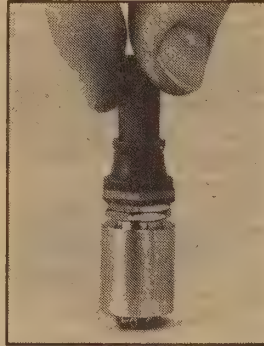

Big Performance

They're only a little over an inch long and weigh under an ounce, but their performance is king-size.

Operation is easy and natural, promoting higher speed and accuracy in positioning and tracking tasks. Resolution is infinite, with continuous output and no dead zone. Rugged construction allows flawless operation even in severe environments. And mean time between failures is 200,000 hours, with a minimum of 10,000,000 cycles.

Small wonder these joysticks have been used so successfully in computer graphics, visual displays, fire control systems, hoists, vehicle control and robots, among other applications. Chances are they could be useful to you, too.

FARRAND INDUCTOSYN®

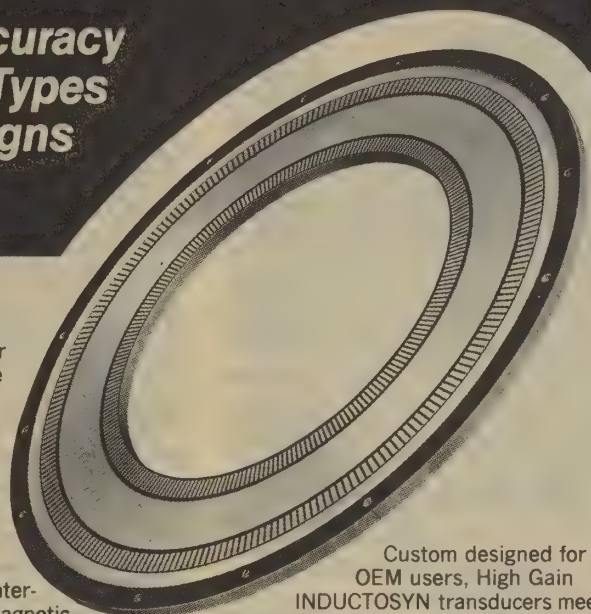

Rotary and Linear Position Transducers

- **Extreme Reliability and Accuracy**
- **Absolute and Incremental Types**
- **Standard and Custom Designs**
- **Competitive Cost**

FARRAND INDUCTOSYN® position transducers are extremely rugged and accurate scale elements used for measurement of angular or linear displacement. Inductively or capacitively coupled, their electrical output signals drive readout displays, generate computer input data, or provide servo feedback signals. Proven applications include weapons systems, machine tools, radar and navigational instruments, computer disk drives, and the Space Shuttle.

Noncontacting INDUCTOSYN elements provide zero wear, never need lubrication. Can be designed to withstand dust, oil films, sea water, hard vacuum, light, extreme pressure, temperature from 10°K to 150°C, and other hostile environments. Have operated at full accuracy for extended intervals in space, in strong magnetic fields, immersed in sea water at 600 feet, and immersed in liquid nitrogen.

Standard single and multispeed rotary scales have diameters from 3 to 12 inches, with 360, 512, 720, 1000, and 1024 poles (others available). Standard 10 inch bar scales can be assembled end to end for any length. Continuous tape scales available up to 100 feet long.

Custom designed for OEM users, High Gain INDUCTOSYN transducers meet specified requirements for size, pitch, accuracy, substrate material, and environment. Auxiliary control signals, such as End of Travel or Track Location, can be included. Substrate can be any material from cast aluminum to fiberglass tape, including lamination directly on user parts. Thermal time constant can be adjusted to match user structure, eliminating inaccuracies during warmup.

ACHIEVABLE ACCURACY FOR SELECTED MODELS

Rotary Types	3" dia. 360 pole	± 2 arc sec
	4" dia. 512 pole	± 1.5 arc sec
	7" dia. 720 pole	± 1 arc sec
	12" dia. 720 pole	± 0.5 arc sec
	12" dia. 1024 pole	± 0.8 arc sec
Linear Types	10" bar scale	± 0.00040" (± 0.001 mm)
	Tape, to 100 feet or more	0.000100"/foot T.I.R.
	Adjustable Linear INDUCTOSYN Scale, length to 115" of travel	Length errors can be reduced to virtually zero over full length, determined by accuracy of standard and resolution of readout or numerical control system.

Individually calibrated standard INDUCTOSYN rotary transducers provide higher accuracy, yet cost less than comparable resolvers. Custom designed High Gain INDUCTOSYN transducers can be delivered at less than \$20 each in high volume production quantities.

KVG, established in 1947 is today the leading and the largest privately owned firm in europe crystals and quartz-related manufacture of quartz crystals and quartz-related components. The growth of KVG is due to state-of-the-art european technology, excellence in research and development, the latest in test and measurement equipment, and computer programs for design engineering, and manufacturing. KVG crystal production begins with high quality cut, dimensioned, and lapped to exact specifications quartz bars which are then precisely cut for individual applications. Computer-aided design, engineering and manufacturing helps KVG to design economically. KVG employees number 300 and include 30 engineers and 15 technicians engaged in the development, testing, and production of KVG products. Miniaturization, a very important development in the electronics industry, is being developed in our laboratories.

Need Zener & Rectifier Diodes?

Electronic Components, Inc.

Now you have a reliable, highly competitively priced source for quality zener and rectifier diodes and a myriad of bridges... **FAGOR Electronic Components, Inc.** Now you can get quick delivery for just about all of them from one source... **FAGOR Electronic Components, Inc.** Make one phone call, write one order—and save money. Write or phone Marvin Zidel on the West Coast or Oscar Galdos on the East Coast.

WHO CARES ABOUT PLAIN OLD DIODES AND RECTIFIERS? YOU DO AND SO DO WE! As a buyer, you do! Because, despite the increase in use of IC's, discrete diode and rectifier use has never been greater. And it's growing. So, why should you care? 1) Some producers have gone out of the business entirely. 2) Others found diodes and rectifiers unprofitable and now deemphasize them. 3) As a prudent buyer, you are always looking for more competitive pricing and money saving opportunities to consolidate your purchasing.

WHAT DOES FAGOR ELECTRONIC COMPONENTS, INC. OFFER . . . and who is FAGOR? For openers, **FAGOR** offers the following **rectifier and zener diodes:** 1 amp rectifiers (**1N4001-4007 series**), 1 amp fast recovery

(**1N4933-4938 series**) and 3 amp rectifiers (**1N5400 series**). In zeners there's 400 mW and 500 mW (**1N751A, 1N957B and 1N5231B series**), 1 watt (**1N4728A series**), 2 watt (**ZY series**), 5 watt (**1N5435 series**) and transient suppressors (**1N6269A series**) as well as the most popular bridge rectifiers. **WE COULD GO ON AND ON!**

As for price, we can't quote in this ad, but it will pay for you to call us and see for yourself.

We are part of one of the largest electronic/electrical/industrial conglomerates in Spain, with facilities throughout Europe and over one billion dollars in sales. **FAGOR** products are unsurpassed for quality and **very competitively priced.**

Large stocks of **FAGOR** semiconductor products are warehoused in the U.S. for quick shipment, so call or write today for price quotes, catalogs or to place your order.

ESC LC FILTERS

OVER 33 YEARS OF SUPERIOR QUALITY AND RELIABILITY!

DC to 500 Mhz

HYBRID FILTERS

To Your Specifications!

ESC will convert your in-house designed analog filter or other networks using discrete components into a low cost molded miniaturized component. Using thick film laser trimmed resistors, chip capacitors and precision inductors we will provide duplicate functional characteristics in miniature packages. ESC can also provide burn-in, temperature cycling and other screening tests as required. Reductions in board space, inspection and assembly time and inventory parts count will result.

ESC produces Low Pass, High Pass, Band Pass and Band Suppression filters in a variety of configurations for a wide range of applications; to MIL-F-18327, industrial or commercial requirements. ESC will speed evaluation, analysis and design of your requirements on its in-house scientific computer for such typical applications as:

- Ultra-miniaturized Flatpack Audio Filters.
- Band pass, Low pass, High pass, Band reject.
- Miniature types, High attenuation, Linear Phase.
- Phase, Group Delay & Amplitude Matched Filters.
- Butterworth, Chebyshev, Elliptic, Bessel.
- Computer designed & computer proofed designs.
- Computer controlled network analyzers permit stringent 100% tests.
- Conformance to MIL-Q-9858A available.

Digital Delay Generators Light Pulse Generators

Digital Delay Generators provide accurate, repeatable control of time. DDGs are a source of stable intervals, pulses and gates produced as low-jitter outputs for precise triggering, gating, syncing, delaying, blanking, calibrating, etc. Timing resolution in 100 ns, 10 ns, 1 ns or 50 ps increments can be provided. Remote IEEE-488 GPIB or BCD programmability is available.

Light Pulse Generators are an optical waveform equivalent of electronic pulse generators. LPGs serve as a basic tool for electro-optics work. Variable are the light output's rep rate, pulse width, delay and power. They're available in operating wavelengths from 490 nm to 1300 nm. Features include fast transition times, adjustable baseline, peak control, CW output, external drive, external modulation and more. Call us at (415) 527-1121 for immediate assistance.

Hybrid Integrated Circuits

Product Offering

Custom Design

Bell Laboratories can design a custom hybrid IC from your circuit specifications. Our experienced application and design engineers work with you to partition and develop a hybrid implementation of your circuit design.

Early involvement with our engineers permits maximum utilization of the benefits of hybrids.

Hybrid Technology

AT&T will recommend the most appropriate technology for your hybrid circuit. Our selection of hybrid technologies includes thin- and thick-film, multilayer thick-film, and PWB-based modules.

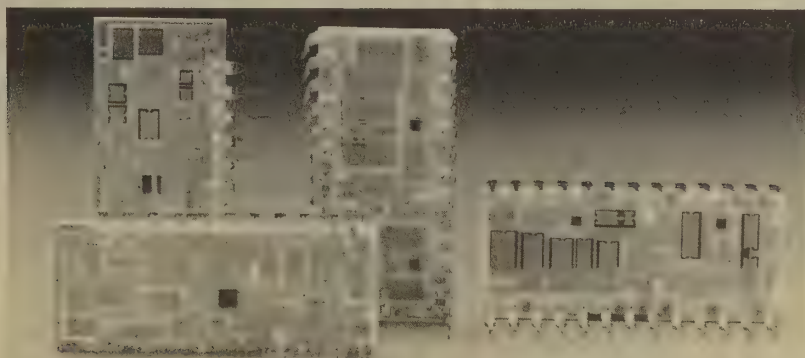

Components

AT&T makes a wide variety of components that can be placed on a

hybrid IC. In addition to thin- and thick-film resistors and capacitors, a full line of AT&T silicon integrated circuits is available for your hybrid application. Commercially available active and passive components in packaged or unpackaged configurations are also used. These include: flat packs, chip resistors, chip capacitors, chip inductors, SOTs, SOICs, chip carriers, and optical components.

Hybrid Packaging

AT&T hybrids are available in a variety of physical packages. Standard SIPs and DIPs often provide the most cost-effective design solution, but we also offer surface mount packages and a variety of leaded and unleaded packaging options.

For additional information, contact your AT&T Account Manager, or call:

Hybrid Integrated Circuits

Design Process

During the design of each hybrid module, AT&T uses standards that ensure a high-quality design. These standards, established by Bell Laboratories, are incorporated in a state-of-the-art computer aided design (CAD) system used to lay out the hybrid IC. Sophisticated computer programs are also employed for thermal analysis of your hybrid. When the design is com-

pleted, CAD tools are used to create the artwork necessary to produce masks and/or screens for the model fabrication process.

Once the hybrid is completed, you are supplied with samples for evaluation. Additional models are submitted to our design engineers to aid in the development of electrical and environmental test specifications, and if requested, to characterize the hybrid for electrostatic discharge (ESD) threshold levels. After your approval, the verified design is transferred directly to manufacture by means of advanced computer aided manufacture (CAM) tools.

Hybrid Integrated Circuits

Improve your system's performance while reducing packaging size by using AT&T's hybrid integrated circuit technology. Our hybrids exemplify highly reliable, precision circuits.

High performance, high density, flexibility, and modularity are just a few of the attributes our hybrids provide to a designer. Let AT&T be your first choice for high-quality hybrid integrated circuits.

Benefits

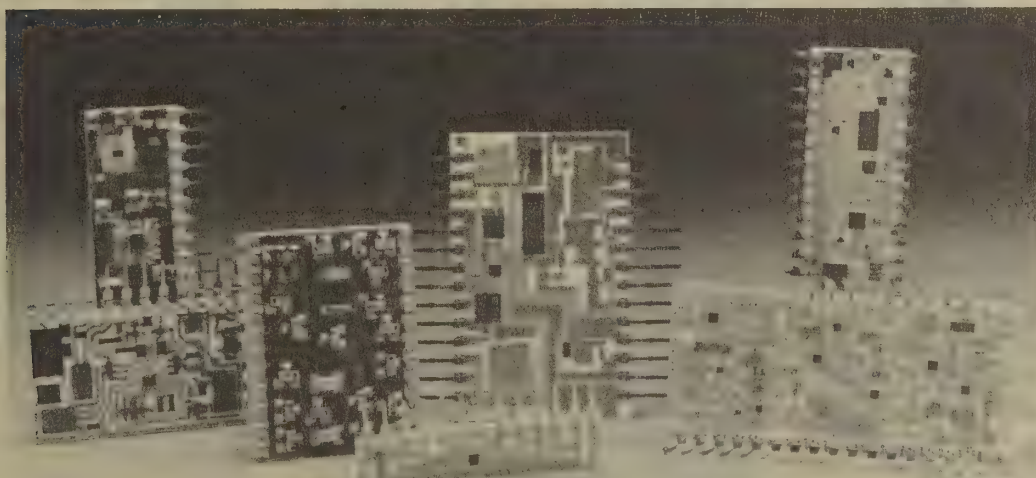

As one of the world's largest hybrid manufacturers, AT&T offers the bene-

fits of both thin- and thick-film technologies for a wide range of applications and product quantities.

AT&T's thin film products offer: precision components, high complexity and density, and high operating frequency, all at competitive prices.

In addition, highly automated manufacturing processes including laser trimming and active RC tuning minimize the cost of each hybrid IC.

Highly stable tantalum thin-film resistors allow for precisely matched and highly reliable resistor-capacitor systems.

Hybrid Integrated Circuits for Military and Industrial Applications

Aeroflex designs, develops and manufactures custom hybrids for both military and industrial customers. We are qualified for use on B1, B52, F15, F16 and LAMPS MK III, plus numerous other ground and airborne systems and medical and communications equipment.

Will a custom hybrid do your job? Hybrid technology combines the quick-response design and manufacturing economies of the printed circuit assembly with the reliability and small size of the monolithic IC. To help you determine when the method will be cost effective, Aeroflex's experienced engineers will consider the circuit itself, manufacturing lead time, and the quantities involved.

Once the decision has been made, Aeroflex has the technical and manufacturing support to meet your most exacting requirements. Our circuit designers will put your parameters together into the smallest, lightest package consistent with effective performance.

We excel in designing active filters, sample and hold networks, low noise pre-amps, voltage regulators, drivers and receivers and digital interface circuits to meet MIL-STD-1553. Electrical performance is guaranteed by our automatic test systems.

In our complete manufacturing facility, Aeroflex has the skilled personnel and production equipment to meet every hybrid design and manufacturing requirement. For most designs, we use thick film deposition for its great flexibility. On occasion, however, we will utilize thin film chip components in conjunction with thick film resistors and conductors. Gold conductors and various silver alloys are often employed, as well as a variety of resistor inks to cover the full range of resistor values. We have and use both laser, for active trimming, and airbrasive trimming systems.

Packaging for all environments. Aeroflex commercial hybrids are often epoxy sealed in ceramic for industrial applications. Heavy duty packaging options include welded hermetically sealed all-metal cases including flat packs, dips, plug-ins and "TO" cans for military requirements.

Product Assurance, in and out. Our Product Assurance Department meets the requirements of MIL-Q-9858A. Quality Assurance, Quality Control, Qualification Testing and Equipment Calibration are its responsibilities. Incoming inspection is performed on semiconductors in accordance with MIL-STD-883, Method 2010.1 Level B. Similar criteria are applied to hybrid inspection. Screening and qualification testing to MIL-STD-883B, Method 5008 and MIL-M-38510 are also available.

Fujitsu really opened my eyes!

The Time: 4:40 P.M.

The Place: The Paris office of a Silicon Valley firm.

The Situation: Albert Barton, a sales representative, is in a quandary. He's gotten an order for 200 personal computers. Problem? The order is from a trade mission, and the keyboards must be equipped with keycaps in various languages and legends. Barton calls headquarters, where they're just coming to work.

At headquarters, Frank Strauss, chief purchasing agent, takes the call. Barton nervously tells him that acceptance of the order relies on the Company being able to supply the intact system, complete with peripherals, within 90 days. Strauss promises to get right back to him.

The Solution: Strauss is amused by Barton's nervousness, because he knows that Fujitsu, his keyboard supplier, can come through. A call to Fujitsu confirms it. Yes, they can supply 200 keyboards. Yes, they can manufacture

keycaps

in 14 different languages and legends for the client. Strauss calls Barton back, and Barton clinches the deal.

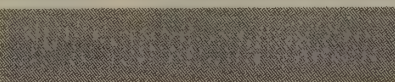

On delivery and set-up, there are *zero rejects*, thanks to 100% testing of Fujitsu products (by both the manufacturing and quality assurance departments).

The Result: Strauss lets Barton in on the "secret" of their success. Says Barton, "Fujitsu really opened my eyes!"

The Fine Print: The identities of our clients have been changed.

The Bottom Line: Dependability and 100% testing are just two facets of everything that goes into Fujitsu components. Design excellence is another. But, you'd expect that from a subsidiary of a \$5 billion worldwide manufacturer of telecommunications, computers and semiconductors. To learn more about Fujitsu components, and what they can mean to *your* products, write Fujitsu Components of America, Inc., 3320 Scott Boulevard, Santa Clara, CA 95054 or call (408) 727-1700. We'll really open your eyes, too.

**Spec us just once. We'll become
your best supplier.**
